

Hi, (A4.4.2 ! Locus 3.15.3 Pro) The list: Not blocking line with active (blue bar) scrolltumb.

List position (grey) indicator <=> List (blue) scroll tool.

Long list: "swipe". On the right side: Small grey listposition indicator.

Push bottom "eye", select some action (ex: first x points). Return to list:

Swipe in list: Grey indicator activated into a small blue "scrollbartumb" tool.

Optimalisation ?

Prevent accidental line or "eye" select while using the \*small blue "scrollbartumb".

Create non "clickable" zone near scrollbar. Move non clickable symbol to right, clickable "eye" to the left.

\* Possible ? A larger, when active, scrollbartumb.

Easier to grab/move on small phone screens.
